A:
Can you say no finish?! That’s right – without finish, WRC decks weather to a beautiful silvery grey patina. Plus, our wood is naturally resistant to rot and decay, which means no man-made additives necessary. So you can just let Mother Nature do her thing and enjoy your deck in all its natural beauty.

Q:
What WRC deck finish requires the least amount of maintenance?

A:
There are many age-defying water-based and oil-based formulations of semi-transparent stains available that can maintain your original cedar colour. Ideally, you want to apply the finish of your choice to all six sides of your wood before installing it… or better yet, opt for factory applied finishes. That way, you can rest easy knowing your Real Cedar was treated by pros. But hey, if you’re an ambitious DIY improver who likes to take more of a hands-on approach, please see the RealCedar.com outdoor “Finishing Tips” section for a comprehensive maintenance guide.

Q:
What if I want to maintain the original colour of my deck and keep it from going grey?

A:
Exposure to UV rays and rain are the primary reasons stains break down. With that in mind, siding stains will generally last a full 3-5 years. But because decks get hit with even more direct sunlight and precipitation than siding, expect deck stains to last on the short side of 3-5 years. Of course, a little scuff sanding before installation to enhance stain penetration will go a long way to prolong your product’s service life. For more info on maximizing your stain, please refer to our “How to Finish Western Red Cedar” publication.

Q:
What is the expected lifespan of a semi-transparent stain on a deck application?

A:
Scuff sanding deck boards with 60-80 grit sandpaper prior to installation will allow the stain to penetrate the wood better. The first coat of stain should be applied to all 6 sides of deck boards, prior to installation. Any moisture that wicks into the installed deck can compromise the finish. So Real Cedar design and construction practices should be followed to ensure good drainage. For more info, please see our RealCedar.com decking “Care & Maintenance” section.

Q:
How can we maximize the performance of a semi-transparent stain on a deck application?

A:
Scuff sanding deck boards with 60-80 grit sandpaper prior to installation will allow the stain to penetrate the wood better. Indoor Panelling: For optimal results, Real Cedar needs to acclimatize to the humidity conditions of your indoor space before installation. This will enable the cedar to achieve equilibrium moisture content with its surroundings. That is important because Western Red Cedar is a natural material and as such tends to react to the humidity content of a new environment. Typically speaking, dry cedar will take up to 14 days to acclimatize to most interior environments.

Outdoor Projects: Good surface preparation practices are essential to achieve a durable, long-lasting exterior finish. And since no two finishing types are alike, we suggest checking out our RealCedar.com siding “Finishing” section for a comprehensive list of guidelines.

Prepare to prep!

How should interior panelling be finished and how should exterior siding be finished? Prepare to prep!

That totally depends on visual preference. Some deck owners love the way Western Red Cedar weathers to a naturally beautiful silver-grey patina. Others prefer the original hue of new Western Red Cedar and then there are those who’d rather tint their decks to another color all together… so to answer your question, to each his own, as they say. As for the maintenance factor, the only upkeep grey decks require is the occasional cleaning, which means less time maintaining your outdoor living space and more time enjoying your outdoor living space. BONUS: Letting your deck go grey is the most environmentally sound choice.

How do you restore a cedar deck to its former glory?

Trust us, this is something you won’t have to worry about for a very looong time. That’s because when a Western Red Cedar deck is properly installed and cared for, it will last for decades. For information on finishing or refinishing your cedar deck refer to our RealCedar.com Decking “Restoration” section.

Where can Western Red Cedar products be purchased locally?

Who has time to search all over town for the right products? Time is precious and gas is expensive, so we’ve made it easy for you. Just log onto RealCedar.com and visit our “Where to Buy” section to find a reputable Real Cedar retailer near you. And if you can’t find what you’re looking for, call 1-866-778-9096 and one of our technical reps will help you source the right WRCLA product for your project.

What makes Western Red Cedar so special?

For starters, this highly revered, durable wood is naturally resistant to rot, decay and insect attacks, which means anything you build with it, will last longer and require less maintenance. It’s also cool underfoot and smells great. But wait! There’s more:

**BEAUTY** – Imbued with decidedly crisp, yet superbly rich, tonal properties, there really is no substitute for the natural beauty of Real Cedar.

**VERSATILITY** – Western Red Cedar is pitch and resin-free. Which means it’s ideal for accepting and holding a wide range of beautiful finishes.

**SUSTAINABILITY** – Independent studies prove that when it comes to environmental performance, natural wood is superior to synthetics products in every way.
